

ANSHIKA GUPTA

anshikagupta379@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#) | +91 8824623961

SKILLS

Languages: Python, SQL, C++, JavaScript

Data Science & AI: Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, NLP, LLMs, Hugging Face, LangChain (RAG, Agents), Databricks

Cloud & Deployment: AWS (S3, SageMaker, Lambda, EC2), FastAPI, Docker, Jenkins, Git, Bitbucket | Familiar with Azure & GCP

Data Visualization & Databases: Power BI, Tableau, Amazon QuickSight | PostgreSQL, SQL Server, MySQL

EXPERIENCE

Data Scientist

Jul 2025 – Present

EXL Services

Noida, Uttar Pradesh

Client Operations (Leading Australian Insurance Provider)

- Worked on deployment and productionization of ML pipelines on Databricks, ensuring reliable execution of scheduled jobs
- Utilized CI/CD workflows with Bitbucket and Jenkins, including pull request-based integration and tag-based deployments across environments (Dev → Staging → Prod)
- Collaborated with ML Engineers to enable model integration and deployment into production systems
- Monitored and debugged Databricks jobs, identifying failure patterns and improving pipeline reliability
- Managed change requests, incidents, and sprint tasks using Jira, ensuring smooth cross-functional collaboration

AI-Powered Runbook RAG System

- Built a RAG system to map real-time Databricks alerts to exact runbook resolution steps, removing manual search during incidents
- Developed a structure-aware PDF parser to preserve document hierarchy, improving retrieval accuracy
- Designed context-aware chunking to improve vector matching quality (0.89–0.92 similarity)
- Implemented Qdrant-based retrieval with strict application-level filtering for accurate results

AI-Powered Insurance Assistant (Agentic RAG + SQL + Dashboard Bot)

- Built an agent-based assistant handling insurance queries using RAG and context routing
- Developed a natural language to SQL system with read-only safeguards for secure data access
- Enabled users to query dashboards and fetch KPIs via chatbot, improving data accessibility
- Implemented client-level filtering and fallback handling to improve response accuracy
- Delivered low-latency (~3s) responses through an optimized backend and retrieval pipeline

Data Scientist

Oct 2024 – Jun 2025

JSimple Technosoft

Noida, Uttar Pradesh

- Built scalable data pipelines using SFTP and AWS EC2, enabling real-time ingestion and processing of workforce payroll data
- Processed and transformed 15M+ records across 500+ fields in PostgreSQL (cleaning, joins, normalization, feature engineering and custom calculation logic for attrition metrics) to deliver analysis-ready datasets
- Developed predictive dashboards in Amazon QuickSight for Quess Corp (one of India's largest staffing firms), delivering workforce analytics (attrition, onboarding, requisition) for 500K+ employees and replacing manual reporting
- Fine-tuned LLaMA 3.2 to build an AI-powered HR chatbot, improving query accuracy by 35% and reducing HR workload

Data Analyst Intern

Feb 2023 – Apr 2023

Forvis Mazars

Gurgaon, Haryana

- Analyzed financial data from ERP/CRM systems using SQL, ensuring accurate, timely audit reports
- Automated data cleaning and developed custom KPIs with Excel Macros and DAX in Power BI, boosting efficiency by 30%
- Led an intern team to develop an ML-based anomaly detection model for audit analytics, collaborating on feature engineering and model evaluation

PROJECTS

- End-to-End TMDb Movie Reviews Sentiment Analyzer:** A FastAPI application that analyzes movie review sentiments using the Hugging Face Inference API and TMDb Review API. It fetches reviews by movie title, classifies them concurrently with a RoBERTa-based sentiment model, and presents visual sentiment breakdowns plus a confidence-weighted sentiment score alongside movie details. Built with cardiffnlp/twitter-roberta-base-sentiment-latest and deployed on Vercel for fast, serverless access. [Link](#)
- Crop Disease Prediction using Deep Learning:** Developed a custom CNN model using the New Plant Diseases dataset (87,000+ images, 38 classes), achieving 97% accuracy. Built a treatment recommendation system for 14 crops and 26 diseases using

TensorFlow, Keras, FastAPI, and a lightweight HTML/CSS/JavaScript frontend, and evaluated performance against popular CNN architectures. [Link](#)

3. Customer Segmentation and Recommendation System: Analyzed a transactional database (541,908 entries) using EDA and PCA, built a recommendation system with collaborative/content-based filtering, and used K-means clustering (RFM) to analyze customer behavior, validated with silhouette scores, elbow method and radar charts [Link](#)

4. Credit Card Fraud Detection Model (99% Accuracy): Achieved 99% accuracy on a PCA-transformed dataset (284,807 transactions), corrected class imbalance with Borderline SMOTE, and compared mean amounts using t-test. Applied Logistic Regression, Naïve Bayes, KNN, and Random Forest, evaluated with Accuracy, Precision, Recall, F1, AUC, and z-test [Link](#)

5. Power BI Analysis of IPL Performance and Trends: Descriptive analysis of IPL data of the decade, included DAX for custom calculations, filters, slicers and pivots creating charts, insights, dashboard and plots. Provided prescriptive insights [Link](#)

EDUCATION

B. Tech in Computer Science (Specialization: Data Science), CGPA: 8.75	Oct 2020 – June 2024
The NorthCap University	Gurgaon, Haryana
CBSE Class XII - 90%	2018-2019
Modern Public School	Bhiwadi, Rajasthan
CBSE Class X - 10 CGPA	2016-2017
Modern Public School	Bhiwadi, Rajasthan

ACCEPTED PUBLICATIONS

Gupta, A., Solanki, D. (2023). Crop Disease Prediction using Deep Learning. Accepted by the International Journal of Innovative Science and Research (IJISRT)

CERTIFICATIONS

Databricks Certified Generative AI Engineer Associate [Link](#)

Google Cloud – Build GenAI Solutions using Model Garden models and APIs [Link](#)

Google Cloud – Deploy an Agent with Agent Development Kit (ADK) [Link](#)

AWS Academy – Machine Learning Foundations [Link](#)

SAFe® 6 DevOps Practitioner [Link](#)
